PROFESSIONAL SUMMARY

Full Stack Engineer with close to three years of experience in delivering mission-critical applications in the banking and insurance industries. At Value Digital Services, I played a key role in designing and enhancing solutions such as MyBIAT and the BIAT Insurance application, within a Backbase ecosystem and microservices-based architecture. I have built solid expertise in Java/Spring Boot and Angular, developing scalable, secure, and high-performance APIs, along with modern web interfaces, in Agile Scrum environments.

PROFESSIONAL EXPERIENCE

Value, Backend Software Engineer 09/2023 – Present

MyBIAT Application (BIAT Bank)

- Developed and maintained REST APIs for managing accounts, cards, and customer services
- Integrated backend services with **T24 core banking system** and external providers (STEG, SONEDE, Ooredoo, Orange)
- Designed asynchronous messaging workflows using **ActiveMQ** for notifications (in-app & push)
- Implemented secure access control using **Backbase Access Control** and **Keycloak**
- Built and enhanced a **Spring Boot microservices architecture** within the Backbase ecosystem
- Enabled inter-service communication via Service APIs with **Swagger/OpenAPI documentation**
- Contributed to CI/CD pipelines and deployment on **OpenShift using Jenkins**
- Collaborated in an **Agile Scrum environment** (Jira, Confluence)

BIAT Insurance Application

- Designed and developed a digital insurance platform (Automobile, Travel, Home)
- Developed dynamic user interfaces using **Angular**
- Implemented microservices architecture using **Spring Cloud (Gateway, Eureka)**
- Modeled and executed business workflows using **Camunda**
- Integrated **ClickToPay** for secure payment processing
- Integrated external APIs (**ARIMA, Digiconstat**) for premium simulation and claims management
- Implemented authentication and authorization using **Keycloak**
- Containerized applications with **Docker** and deployed on **Kubernetes**

Jeune Chambre Tunisienne du Québec (JCTQ), Final Year Project Intern 02/2023 – 06/2023

RECAN Platform (Circular Economy – North Africa)

- Designed and developed a web platform promoting circular economy initiatives
- Built a **microservices architecture orchestrated with Kubernetes**
- Implemented inter-service communication using **NATS Streaming**
- Developed backend services using **Node.js, Express, MongoDB**
- Built front-end interfaces using **React, Next.js, Tailwind CSS**
- Implemented authentication using **JWT**
- Automated testing using **Jest** and managed deployments with **Scaffold**

Trust IT, Software Engineering Intern 06/2022 – 09/2022

- Designed and developed “**Perfecto**”, a web application for comparing e-commerce product prices
- Built REST APIs using **Java and Spring Boot**
- Developed front-end features using **Angular**
- Managed data persistence using **MySQL**
- Used **GitHub** for version control in an Agile environment

EDUCATION

Engineering Degree in Software Engineering, ESPRIT 09/2023 – 09/2027 | Ariana, Tunisia

Bachelor’s Degree in Information and Communication Technology Management, ISET'COM 09/2020 – 07/2023 | ElGhazela, Ariana

SKILLS

Backend Java, Spring Boot, Spring Cloud, Spring Security, REST APIs	Frontend Angular, React, Next.js	Messaging and Integration ActiveMQ	DevOps Docker, Kubernetes, Jenkins, OpenShift, Nexus
Databases MySQL, MongoDB	Architectures Microservices, Backbase	Security & Authentication Keycloak, OAuth 2.0	Tools Git, Jira, Confluence, Postman

LANGUAGES

Arabic Native	English Fluent	French Fluent
-------------------------	--------------------------	-------------------------

CERTIFICATIONS

• Microservices with Node JS and React (Udemy)	• Backbase Certified Developer - Backbase Academy	• Master Microservices with SpringBoot, Docker, Kubernetes (Udemy)
--	---	--

ACADEMIC PROJECTS

Stock Management Web Application for Retail, <i>ESPRIT</i> • Designed and developed a stock management web application enabling product tracking, with stock level alerts and a secure authentication system • Built on a microservices architecture with asynchronous communication • Technologies: Angular, Spring Boot, Java, Microservices, API Gateway, Eureka Server, RabbitMQ, Keycloak, REST APIs, Security		
CI/CD Pipeline for Building and Deploying Java Microservices, <i>ESPRIT</i> • Implemented a CI/CD pipeline to automate the build, packaging, and deployment of Java-based microservices • Integrated containerization using Docker, artifact management with Nexus, and automation using Ansible • Set up monitoring using Prometheus and Grafana • Technologies: CI/CD, Groovy, Nexus, Docker, Ansible, Prometheus, Grafana, Microservices, Java		

INTERESTS

• Backend & DevOps Technology Trends	• Reading	• Running
